

Fits on Indoor Column
To be used for tables
of 90 cm and 110 cm

InBetween safer together
Indoor Column Extender

Due to Coronavirus, our health and wellbeing is very much at the forefront of our daily lives. We realise that we must remain alert in minimising the risk of contamination for our guests, our colleagues and ourselves.

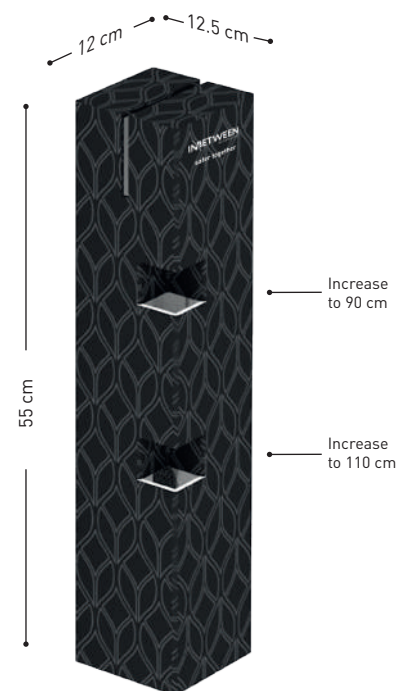

InBetween Column Extender is a practical and flexible solution to place your existing InBetween Indoor Column between standing tables and bubble tables.

InBetween Column Extender allows you to customize the standard Indoor Column for tables with a height of 90 cm and 110 cm.

InBetween Column Extender is made of FSC cardboard and executed in the same design as the Indoor Column, so that it does not detract from the design of the existing solution.

InBetween Column Extender can be easily placed between the column and the screen of the InBetween Indoor Column. There is no need to mount anything on the tabletop.

InBetween Column Extender, like the InBetween Indoor Column, comes in a set of 4 pieces.

♻️ Cardboard product - Indoor use only

Easy to assemble
